Growth Be a high growth company where staff also grow professionally.

Respectful & Inclusive Show all stakeholders respect. Communicate effectively and listen to learn from others.

Meaning Positively impact people and the planet. Introducing Dustbane's lastest sustainable initiative...

GIVE meaning TO YOUR cleaningTM

The Dustbane Team is excited to build on its legacy of social and environmental responsibility. On November 5th, 2019 we launched our Give Meaning to Your Cleaning[™] Initiative. This represents a strengthened commitment to delivering high quality products and customer service excellence, while making responsible, sustainable choices for our planet and giving back to people in our communities. We believe that our employees, partners, and customers want to work with organizations that are doing right by our planet and its people, while helping them solve a business problem.

Dustbane is also committed to taking action on climate change. An easy and impactful way to combat climate change is by planting trees. Restoring destroyed forests is one of the keys to healing the planet and maximizing nature's ability to tackle global warming. Our latest initiative promises to plant a tree for each eligible 4 L ECOLOGO[®] certified hard surface cleaner sold. With your help, our goal is to plant 1 million trees by 2025.

Sustainability

Sustainability is about more than green cleaning – it means finding solutions to address our current needs, without compromising the ability of future generations to meet their needs.

Sustainability presumes that resources are finite, and underscores the importance of using these wisely. Rather than relying on what seems easiest and cheapest today, sustainability requires us to think creatively and, when it makes sense, be open to doing things differently.

Dustbane incorporates the principles of sustainability into each of its business decisions. We are committed to providing high-quality and high-value cleaning solutions while continuously improving our operations through sustainable products, packaging and manufacturing processes.

ECDUDGD® Certified Products

ECOLOGO® Certified products are certified for reduced environmental impact. ECOLOGO® Certifications indicate that a product has undergone rigorous scientific testing and exhaustive auditing that prove its compliance with stringent, third-party, environmental performance standards.

To meet ECOLOGO®'s strict guidelines, our products meet the following criteria:

- × No A.P.E. (Alkyl Phenol Ethoxylates)
- × No E-glycol Ether
- × No phosphate (limited in degreasers)
- × No ammonia
- × No or very low V.O.C.

- ✓ Low packaging (Super Concentrates)
 ✓ Biodegradable
- × No petroleum ingredients
- × No EDTA/NTA (causes entrapment of heavy molecules)

Our products are formulated with high cleaning standards. While focusing on providing innovative solutions to environmental challenges, we always ensure that our customers win on product performance.

ECOLOGO® Certified Products

Dustbane offers a complete line of products that are tough on dirt and easy on the planet. We create better products in a more environmentally responsible way. UL Environment provides independent, 3rd party credible validation of green marketing claims. Upon validation, UL Environment recognizes sustainable products by bringing trusted transparency to the green marketplace.

Floor Care

You only get one chance at a first impression. Walking into a health care facility, office, or retail store, what is one of the first things you notice? The floors! Are they clean, clear of debris and scuff marks, or are they dirty and dingy? Floor care is often overlooked but the impact it has on customers and clients is immeasurable.

Safety First!

Safety is very important during floor maintenance, for both the person doing the cleaning and especially for people walking in the area being cleaned. Slips and falls can happen in a second and can be very dangerous, causing broken bones, head injuries or worse. The proper use of floor signs as well as following correct cleaning procedures can reduce the risks of injury.

Proper Use of Chemicals

The improper use of cleaners and strippers may damage floors. Frequent treatment or inadequate rinsing may cause cracking, shrinking and/or discoloration. Always read the label and SDS instructions prior to use.

Water

Using the correct temperature of water, cold to room temperature, has a large impact on the outcome of the cleaning process. Follow all directions on labels and SDS sheets carefully to avoid any problems.

Heel Marks

Black heel marks can be removed using a fine nylon pad moistened with a neutral pH detergent. Rinse thoroughly with a clean cloth and water.

Gum, Tape and Other Sticky Residues

Sticky residue can be removed with a smooth, plastic putty knife and Doodle Buster. Rinse with a damp cloth after application of product.

Proper Use of Equipment

Keep all equipment clean and in good condition. Wash and rinse mops, pads, applicators, brushes and power cords after each use. Use a dedicated mop for each procedure. Proper use of equipment will help prolong its life, reduce maintenance needs and help ensure a clean floor after every task.

Floor Strippers

Floor finishes create a glossy, protective layer that keep your floors attractive and free of scratches and stains. However, over time these layers wear down and become dirty, and need to be removed before a new one can be reapplied. Floor stripping is all about completely removing old wax, soil and debris found on the floor. Generally, it is one of the most labor intensive and time consuming jobs in the professional cleaning industry.

Time-Out Plus Floor Stripper

Time-Out Plus' innovative formula is powerful yet environmentally friendly. It cuts through layers of floor finish and sealers quickly and efficiently, with no fumes or odours. Certified UL 2777

Didyou know?

When stripping finish from a floor, a high pH solution is used. This process leaves a high pH (alkaline) residue on the floor and leaves the floor with a high pH. The floor must be neutralized using an acid based neutralizer to bring the pH closer to neutral (7). Ideally the pH of the floor should match the pH of the sealer or finish to be applied.

Neutralizers

A neutralizer cleaning chemical is anything but neutral. In the cleaning world, a cleaning chemical that is termed a "neutralizer" will most often be acidic, in the pH range of 2. Neutralizers are used to bring alkaline liquids and residues back to a pH of 7 or neutral, making it simpler to clean up and preparing the floor for the floor finish.

Neutralizer

Floor Neutralizer & Cleaner (pH 1) Neutralizer's effective penetrating action conditions

floors by neutralizing and cleaning stripper residues before applying a water emulsion floor sealer or finish.

Identifying your floors

The key to correct floor care is knowing the type of floor you will be caring for. Many floors can be ruined by applying an inappropriate product. Floors are divided in two categories: non-resilient and resilient.

Non-Resilient Floors

This flooring material is hard and generally has a higher cost, it does not flex or spring when walked on. Examples of non-resilient flooring are: ceramic tiles, marble, slate, terrazzo, concrete, porcelain, quarry tiles and onyx.

Resilient Floors

This flooring material is firm, yet has a "give" or "bounce back." It will flex without cracking, meaning the floor has some amount of cushioning when a load is placed upon it. However, carpeting is not resilient flooring because it has "give" but is not firm. Examples of resilient flooring are vinyl tiles, asphalt tiles, rubber, linoleum, wood, cork, laminate and poured synthetic resin.

Floor Sealers

Floor sealers are able to protect your existing flooring investment from future abrasions and dirt as well as improve floor safety. They considerably reduce maintenance costs. One thing to remember, is that floor sealers and floor finishes are not the same products. Sealers are used for building a base before you apply a finish and, given their high solids percentage, they exhibit little or no shine. A sealed, unfinished floor will have a dull or matte appearance.

Foundation <

Foundation achieves uncommon levels of durability and permanency for total sealer protection for resilient and non-resilient floors. APE and odour free. Certified UL 2777

Nu-Coat Floor Sealer

An extremely durable, water-based sealer/ undercoater which prevents moisture and dirt penetration.

Floor Finishes

Floors act as a supporting background for the rest of the room and provide that clean, luxurious look. The look of your flooring can greatly impact the perception that people have of your business. The durability of a floor is also influenced by the amount of wear it will receive. Floor finish creates a hard surface that can withstand wear better that bare flooring.

Gran-Prix XL ** All System Floor Finish

Gran-Prix XL is an innovative floor maintenance solution. With its versatile, acrylic copolymer based formula, it's the perfect floor finish for all maintenance systems.

Format	Code	Case QTY
5 L	52020	4
20 L	52021	1
	ψ	I

How to

GRAN-PRIX XL

Start by spraying the floor finish using a spray bottle. Buff the floor using a dual speed floor polisher with a red pad until the desired gloss is achieved.

Spray-buff or dry bright floor finish cannot be buffed using a UHS floor machine.

What are floor finish solids?

The solids are the plastic or polymer molecules that are left on the floor when you apply finish and can have a big impact on the performance of the finish.

Defence ★ All System Floor Finish

A hard, glossy, metal interlocked floor finish that protects against stains, scuffs and scratches.

Format	Code	Case QTY		
5 L	51023	4		
20 L	50105	1		

Maintainers

Floor maintainers can considerably improve cleaning standards and also achieve cost savings. A maintainer is a combination of detergent and wax polymer which cleans, enhances slip resistance, removes black marks and scuffs while building gloss on hard floors.

Challenger

UHS Floor Cleaner & Maintainer

Cleans and restores gloss in one operation. Specifically formulated to clean floors maintained with ultra high-speed finishes. A floor finish that stays cleaner longer, reducing the need to strip floors. Works great on finished wood floors.

Cross-Link

Spray Buff Maintainer A spray buff solution used to repair your floor and maintain its high appearance between refinishing. Formulated to restore gloss to tired, worn floors while removing scuff marks and scratches.

Format	Code	Case QTY	
4 L	51952	4	

Floor Care

Step 1: Floor Preparation

Before proceeding, remove all furniture and roll up all walk-off mats. Sweep the room or vacuum to remove all debris from the floor surface. Safety is very important during floor maintenance, for both the person doing the cleaning and especially for people walking in the area being cleaned. Slips and falls can happen in a second and can be very dangerous, causing broken bones, head injuries or worse. The proper use of floor signs, as well as following correct cleaning procedures, can reduce the risks of injury. Always wear the appropriate personal protective equipment.

Step 2: Stripping

The following factors are important to consider:

- Ease of penetratic
- of the film • Cost in use
- Odour
- Free-rinsing

Step 3: Sealing When choosing a sealer,

		Formalation	A anala da	Cand	Nu. Coot
When choosing a sealer, just remember the acronym SAP:		Foundation	Accolade	Gard	Nu-Coat

Hard Surface Care

Bacteria are everywhere — especially on the surfaces you touch. By maintaining clean surfaces, you'll make sure that the right levels of hygiene in your environment are upheld. Without regular surface cleaning, cold and flu viruses are more readily spread from person to person. This can lead to periods of employee absence, which interrupts business, and costs the company time and money.

Terminology:

Dustbane's Dynamic Surfactant Technology (D.S.T.)

A surfactant that is exclusive to Dustbane. It was developed to increase the efficiency of the products while maintaining a neutral pH. This surfactant is biodegradable, and contains no phosphates, VOCs, EDTA or APE. It is not toxic to both aquatic life and humans.

VOC

Volatile organic compounds (VOCs) are emitted as gases from certain solids or liquids. VOCs include a variety of chemicals, some of which may have short and long-term adverse health effects.

Solvent Free

Different solvents have different health effects, which will depend on the length and degree of exposure. Such exposure could result in skin problems such as drying, cracking, reddening, blistering of the affected area, or headaches, and drowsiness.

Ammonia Free

Vapours may irritate the skin, eyes, throat, and lungs. People with asthma may be particularly sensitive to the effects of breathing ammonia. Ammonia may also cause kidney and liver damage.

Phosphate Free

In the past, phosphates were commonly used in detergents because of their superior cleaning performance. Higher than normal phosphate levels can destroy the health of lakes, streams or other fresh bodies of water, as they allow algae to grow faster than would naturally occur.

All-Purpose Cleaners

A detergent is made with surfactants that aid in cleaning by reducing the surface tension of water, making soils water soluble. Water, by itself, cannot clean stains, especially organic stains, which have oil in them. Water's surface tension does not allow the oil and the water to interact, thus the saying "water and oil do not mix". When the surface tension is lowered through the addition of the detergent/ surfactant, the water becomes, in a sense, "wetter", because it spreads itself more and is more loose than it was in its normal state.

Excelsior

General Purpose Hard Surface Cleaner Offers a cleaning solution with exceptional performance without the use of harsh chemicals. It offers superior cleaning efficiency therefore reducing labour. Certified UL 2759

Nu-Life (pH: 10.6)

pH scale:

Choosing the right cleaning product using the pH scale

Running from 0-14, the pH scale helps you to determine whether a substance is acidic or alkaline. A substance with a pH of 7 is neutral; anything lower than 7 is increasingly acidic, with 0 being the most acidic, and anything higher than 7 is increasingly alkaline, with 14 being the most alkaline.

Cleaning is an attempt to neutralise the impact of acidic or alkaline ions in a stain or soiling. So if you wish to clean a soil that is acidic, you should use an alkaline cleaning product, and vice-versa.

Fats and oils (e.g. food, industrial and some bodily residues) are acidic, therefore alkaline cleaning products are required in order to break them down and make them easier to clean.

Cleaning products with an acidic pH are necessary for the treatment of stains like rust and mineral deposits, as these are alkaline. As with using alkaline cleaning products on acidic stains, acidic cleaning products break down the deposits so the offending stain can be more easily removed.

General Purpose Disinfectants

Disinfecting vs. sanitizing — what's the difference? The purpose of a sanitizer is to reduce the number of microbes to a safe level, while a disinfectant will completely destroy them.

Quat Plus 🔶 Liquid Disinfectant

A disinfectant and germicidal detergent with the cleaning performance of a neutral quat that eliminates malodour by destroying a wide range of bacteria, fungi and viruses without the harsh smell of chemicals. Effective against influenza A (H1N1). DIN: 02298694 Certified UL 2794

Oxy-Q 🗢

Hydrogen Peroxide Based Disinfectant

Utilizes the power of hydrogen peroxide to create a non-toxic, complete cleaning solution. Oxy-Q has limitless cleaning options: hard surface cleaner, floor cleaner, carpet cleaner, washroom cleaner, degreaser, disinfectant, and deodorizer. An effervescent disinfectant and sanitizer tablet that just requires water. Effective against a broad range of microorganisms including C. difficile spores, Hepatitis A, Norovirus and Canine Parvovirus. A single dose tablet delivers accurate strength solution every time, eliminating measure and pour guesswork. DIN: 02470381

Degreasers

Have you ever wondered how degreasers work? It's all about chemistry! Degreaser is alkaline (base) and grease is acidic. Degreaser neutralizes the pH of the grease, causing it to fall apart (dissociate) and be more easily wiped up. We offer two types of degreasers for both the industrial application and the food industry.

POWER LIFT

Complex Orange

Cost-In-Use

An important factor to consider when purchasing a product is the "cost-in-use". Comparing the liter's prices is not a good indication of the final price paid. The formula to obtain the cost in use is as follows:

(Price / Litre) / Total Parts From Dilution = Cost-In-Use

Here's an example:

Power Kleen

Cleaner & Degreaser A non-butyl water-based cleaner and degreaser

and oil residue are a problem. It gives the end users an alternative to butyl-based products.

Carpet Care

Carpet serves as a "sink" or collection point for everything that is tracked in or settles out of the air and can be tricky to clean. Carpet and hard floors require the same basic level of care and the same basic steps. Spots and spills should be attended to quickly, and regular cleaning should be performed on both. Both require a comprehensive program to ensure the best appearance and cleanliness.

All carpet maintenance programs should consist of the following 5 steps:

Step 1: Preventive Maintenance

70% of all carpet soil is tracked into buildings from the outdoors by way of foot traffic. If soil is trapped at the door before it reaches carpet areas, cleaning time, labour dollars and health risks can be reduced.

Step 2: Vacuuming

Vacuuming can remove up to 90% of soil from a carpet. Unlike hard flooring, carpet is three-dimensional and has the depth and ability to hide soiling. Carpet can trap and hold up to 11b. of dirt per square foot before it starts looking dirty.

Step 3: Spot Removal

There is no such thing as a stain-proof carpet. Carpets treated with stain protection are designed to slow down the absorption of liquids into the carpet fibers, making it easier to clean and allowing more time to attend to it. The longer you wait to remove a spot, the more difficult it will be.

Step 4: Interim Cleaning

Heavy traffic areas may require interim cleaning between deep cleanings. Interim cleaning will not only extend the length of time between deep extractions, but will prolong the life of the carpet by reducing soil levels and reducing the overall number of extractions throughout the life of the carpet.

Step 5: Deep Cleaning

Water extraction is the most effective method of deep cleaning carpets. It is done using a cleaning solution which is sprayed onto the carpet at high pressure using a jet spray.

Carpet Cleaners

A stain is a "spot" that was not removed in time. To remove a stain, simply blot it, work from the outside in, rinse thoroughly with clean water, then blot again. Never scrub the carpet, or you risk ruining the carpet fibers or letting the spill soak through to the carpet pad.

Eco-Expert A Carpet Cleaner

This neutral pH formula can be safely used on all stain resistant and colorfast carpets; works well with all Dustbane spot and stain removers. The blend of very low foaming surfactants will not clog vacuums, and allow recovery tanks to be completely utilized. Contains no phosphates. Certified UL 2795

CSQ

Carpet Cleaner, Deodorizer and Sanitizer

A superior performance product formulated to clean, deodorize and sanitize carpets. Contains a twin chain quaternary ammonium compound which reduces the growth of Gram-negative and Gram-positive bacteria. Ideal for use on carpets in health care facilities such as hospitals, nursing homes, clinics, dentist offices and others.

Personal Care

Hand washing is like the "do it yourself" vaccine. Proper hand washing is not only hygienic, but it is the single most effective way to prevent the spread of infections in all settings – from the workplace and home to childcare facilities and hospitals, and will help you stay healthy. You carry millions of microbes on your hands. While most of them are harmless, you do attract some that can cause illnesses, such as colds, flu, and diarrhea. Germs can be spread by simple person to person contact or by touching a contaminated surface or object and then touching your face.

Hand washing can greatly reduce the chance of spreading or getting germs. The mechanical action of scrubbing loosens up the dirt and microbes on our hands and the soap picks them up and binds to them so that the water can wash them away. The use of gloves is not a substitute for hand washing.

How to:

- Remove any rings or other jewelry.
- Wet your hands with clean, running water and apply soap.
- Lather your hands by rubbing them together with the soap. Be sure to lather the back of your hands, between your fingers, forearms and under your nails
- Scrub your hands for at least 20 seconds. Need a timer? Hum the "Happy Birthday" or "A, B, C" song twice from beginning to end.
- Rinse your hands well under clean, running water.
- Dry your hands using a clean towel or air dry them.

Hand Cleaners

Many people would agree that washing your hands on a regular basis is essential to reduce the spread of common illness, especially during cold and flu season. Easily accessible soap is the perfect way to remind people to wash their hands.

Antiseptic Hand Soap Antiseptic Hand Cleaner

A ready-to-use, suds forming antiseptic hand cleaner containing a skin protecting emollient. Contains two antimicrobials that provide a broad range of disinfection; will not become contaminated in the dispenser; tested and proven against a very broad spectrum of both Gram-positive and Gram-negative bacteria associated with surgical and cross-infections. DIN: 00564311

Washroom Care

Regardless of your industry and whether your company is big or small, the state of your restroom can make or break a customer's experience. A clean restroom encourages positive feelings in customers about your business. This is because customers can associate the cleanliness of your company's restroom with the cleanliness of your entire business. This is especially true if you're a restaurant owner. Recent studies have shown that 75% of adults wouldn't return to a restaurant with a dirty restroom. This means a clean restroom can lead to repeat business and higher earnings.

What exactly creates a negative washroom experiences? One of the top responses was unpleasant odours (57%). Unpleasant odours rank even higher than slippery floors and overflowing trash cans.

Odour Control

For the majority of restrooms, urine is the main source of odour. This odour is actually caused by bacteria that has grown by using urine as a food source. As the bacteria grows, so does the odour. Cleaning crews should disinfect restrooms daily, using an acid neutralizer to remove urine from floors. Grout, including floor and wall grout, is a perfect place for the bacteria to grow, so cleaning crews should pay close attention to these areas. In restrooms where poor airflow is a problem — generally, most restrooms — a deodorizer can help. Choosing the right type of deodorizer, as well as the method of deodorizing, is an important part in addressing restroom odors.

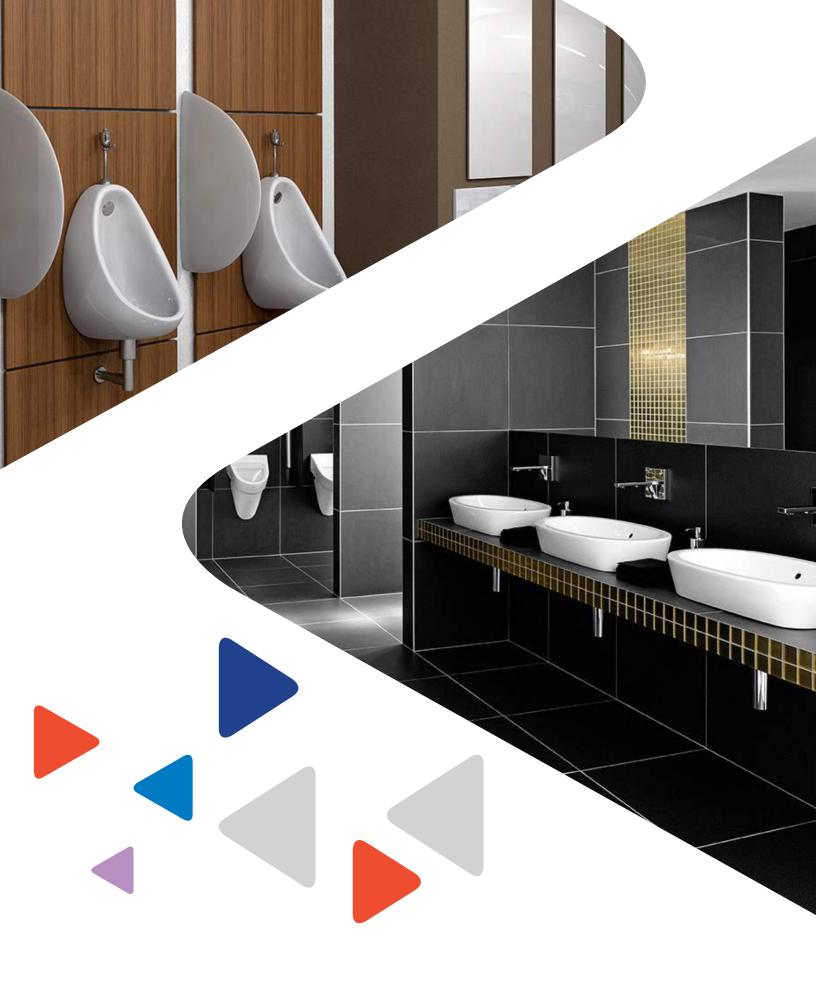

Complaints

Clean, fresh smelling restrooms can lead to happier customers, which reduces the quantity of complaints against your establishment. A clean facility shows your company's dedication to all phases of the customer service experience. In the modern age, all it takes is one internet blogger to comment on the state of your company's toilets to discourage other customers from frequenting your establishment.

Healthier

Good restroom hygiene practices eliminate the transfer of sickness and disease among employees, reducing absenteeism and associated losses in revenue and productivity in the workplace.

Non-Acid Cleaners

Non-Acid cleaners help break down water scale and urine salts with high foaming action. They are highly effective yet will not damage chrome, brass or other polished metal surfaces. They are a safer alternative to acid cleaners such as hydrochloric acid.

HI-GENIC

DUSTER

Blu-Lite *** Disinfectant Bowl Cleaner

An all-in-one viscous cleaner, disinfectant, descalent and deodorizer. An acid replacement cleaner that offers optimal performance. Ideal for toilets, urinals, sinks, bathtubs, faucets, chrome, stainless steel, showers, ceramic, etc. A complete solution for washroom maintenance. DIN: 00278871

Bio-Bac II

Bio-Based Cleaner and Deodorizer

A blend of surfactant and bio-cleaning agents (bacillus) that provide a revolutionary cleaning solution for floors and tiles. It penetrates hard surfaces and grout to remove organic soils in a safe and efficient way. This "people friendly" bacteria keeps working long after the initial application. Certified UL 2792

Oxy D.S.T.

Hydrogen Peroxide Based Cleaner Combines the powerful cleaning and degreasing properties of Dustbane's Dynamic Surfactant Technology with the amazing stain lifting power of oxygen bleach. Certified UL 2759

Acid Cleaners

Acid cleaners help break down difficult stains like rust or mineral deposits, and make excellent drain openers. Their formula reacts chemically with the material in the clog, and the reaction releases heat, which is necessary to melt congealed grease.

SPECIALTY CLEANERS

BIO-BACI

Quick Fix **

A fast acting bowl cleaner. Its viscous formula adheres to surfaces of the toilet bowl and urinal allowing for deep penetration to remove hard water stains, rust and even stubborn mineral deposits. Does not harm plumbing and septic systems.

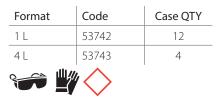

Strate Flush **

Emulsion Bowl Cleaner & Deodorizer

An acid bowl cleaner designed to clean, deodorize, and remove rust and mineral stains in one operation. Does not harm plumbing and septic systems.

Presto *

Disinfectant Bowl Cleaner An acid-based cleaner that effectively removes rust, stains, scale, and hard water deposits instantly. It cleans and disinfects in one easy step. Does not

Nitro

Liquid Drain Opener

Provides a powerful and fast acting solution for drainage issues as it clears the toughest clogs from any drain quickly. Safe for all septic systems and pipes, including PVC, plastic, and old pipes.

Format	Code	Case QTY
1 L	50176	12

Urinal Odour Control

In men's washrooms, urinals are often the culprit of urine smells. Some urinal's design can cause splashback, in which case a urinal screen with anti-splash feature can become a great way to keep the area around the urinal clean. Using an enzyme-based puck or screen can also help control odours coming from the plumbing.

3D Shield Urinal Screen

Its unique post and lattice design eliminates 99% of splashback and installation errors. More than twice the fragrance than the competing urinal screens, the 3D Shield releases beneficial bacteria for over 30 days.

Tor over 50 days.

See the 3D Shield in action!

Visit our YouTube Channel: https://www.youtube.com/watch?v=bJ3iFqnbQGQ

3D Shield Has more open design, increased height, and does not splash.

Competitor Screens With fewer openings, they pool liquid, causing splashback and more clean up.

Enviro Block **

Water Soluble Deodorizer

Instantly eliminates persistent odours at their source. The Enviro Block chemically combats drain odours to deodorize restrooms urinals.

Dobur Control

Odour management can be a tough task. With the multitude of options to manage odours, it can be overwhelming and confusing to pick the appropriate product for the task. The first thing to do when tackling odours, is to find the source. There are tools you can use to find the source of the odour, such as a black light with fluorescence contamination. But remember, there are other substances that will react to the light, too. Another great tool is a moisture detector. Once you have found the source, the next step is to clean the surface. If you are unable to remove the majority of the source of the malodour, odour control products can be used. Many products are available, but what is the difference between an air freshener, an odour counteractant or deodorizer? How do you know which one is best and how do they work? Here's a quick explanation.

Deodorizer/Air Freshener

A product that "deodorizes" will mask odours but does not cover the odour permanently it simply adds a good odour to a bad odour or can give a room a fresh scent if odours are not an issue.

Odour Counteractant/Eliminator

These products have an odour counteractant in addition to the fragrance. They neutralize the malodour by breaking down its molecules in the air. An air freshener with odour counteracts is the best solution for a facility with offensive malodours such as smoke and rotting food that should be removed from the air.

Enzyme Based

Enzyme based products attack the contamination, creating enzymes that break down odour-causing matter — think of them like little pacmans. These products are ideal for bio-based odour such as urine that comes from naturally occurring bacteria and uric acid crystals. Porous damp surfaces like grout host and trap the bacteria, which feed on urine and consequently release strong odours. Humid conditions or rewetting the surface can reactivate the odours. The only effective way to completely eliminate such odours is to wipe them out at their source. The great benefit of enzyme based products is that they will keep working even after the initial application.

Odour Control

Our senses are always on the alert – and the first impression they get of any environment is often the most important. Visible cleanliness and a pleasant fresh smell go a long way to creating a positive impression of any restroom, changing room, or other facility.

Aquascent *** Water Soluble Deodorizer

Aquascent's advanced technology utilizes premium natural fragrance oils, and unprecedented residual performance to give your "clean image" a refreshing boost. Ideal to eliminate chemical smells commonly found in cleaning solutions. It can be used both as an air freshener or additive in your cleaning solution.

Format	Code	Case QTY
5 L	51144	4

Disappear * * Malodour Counteractant

Effectively counteracts and eliminates a broad spectrum of unpleasant odours. Its ultra powerful formula makes any undesirable odour disappear quickly without using or leaving an overpowering cover-up (masking) perfume. Can be used both as an air freshener or additive in your cleaning solution.

Format	Code	Case QTY
5 L	51014	4

Cancel *

Malodour Counteractant

A liquid, multi-purpose, water soluble malodour counteractant that effectively neutralizes a wide range of unpleasant odours. It can be used both as an air freshener or additive in your cleaning solution.

Bio-Bac II

Bio-Based Cleaner and Deodorizer A blend of surfactant and bio-cleaning agents (bacillus) destroys odours at their source. Bio-Bac II eats away at the odour-causing matter just like little pacmans. This "people friendly" bacteria keeps working long after the initial application. Certified UL 2792

Format	Code	Case QTY

Specialty Products

Dustbane's product offering has definitely grown dramatically since 1908, but the history behind the Canadian company remains an integral part of who Dustbane is and strives to be.

We have extended our product line to offer a broad range of cleaning solutions for all applications and needs. We also offer tools to assist you in selecting and accomplishing your cleaning task.

Our Website

Our website offers tools and resources to help you explore and understand your options with our cleaning products. The product information is available at your fingertips as well as all the SDS and other tools you may require. The website is responsive to allow easy and convenient access from all desktop and mobile devices.

Dustbane Way

Our "Dustbane Way" brochures are a comprehensive guide to cleaning according to your specific needs and environment. From schools to restaurants, to industrial settings, these guides offer great tips on the best products to use in specific situations.

White Paper

Written based on pertinent information related to our industry, our white papers are designed to offer you important information that can assist you in understanding terminology or how to tackle specific cleaning tasks. An easy to read resource that can assist you in making informed decisions on your cleaning products and pratiques.

Specialty Products

Particular situations require special products to complete the cleaning task. Maintaining a pristine environment isn't subject to how often or thoroughly you clean, but rather the type of products you use. Find an assortment of far-reaching cleaning supplies that go the extra mile to deep clean, restore and prevent mess and imperfections around your business, office or restaurant.

Azure

All-Purpose Surface & Glass Cleaner A surface cleaner that delivers exceptional performance, while being also an ideal choice for glass surfaces. Its mild formula can also act as a dust collector when sprayed lightly on a microfiber cloth and an excellent stainless steel cleaner. APE, VOC and ammonia free. Certified UL 2759

ModularFlex Series & Dilution Systems

Concentrated chemicals are the sustainable choice compared to ready-to-use products.

ModularFlex Series

Dustbane's reformulated ModularFlex Series was designed to address all your cleaning needs. We now offer 6 highly versatile products, that will reduce your cleaning footprint. Our customers usually look for simple, efficient, economical and environmentally conscious products, the perfect description of the ModularFlex Series.

The possibilities for these products are practically limitless, making them the ideal choice. To begin, they save space. The ModularFlex Series come in smaller containers (2 L), meaning less space is required to set them up and store them. It's also easier to handle them than larger containers. The ModularFlex Series are also equipped with a closed loop system that eliminates exposure to chemicals when connecting and changing products in almost any chemical dispenser. They are designed to simplify work and eliminate spills that can be dangerous to the user. With the elimination of spills, this prevents chemical loss and promotes a cost effective use of our products.

Dilution System

A dilution system automatically mixes a concentrated chemical with water to make a ready-to-use solution that is generally dispensed into a spray bottle or mop bucket. A dilution system offers 3 major advantages:

Cost Savings

The cost savings with concentrate is largely due to the fact that when determining the price of concentrated chemicals, you don't have to factor in the additional freight cost of water. Freight costs play a major role in determining the case price that manufacturers need to charge. Also, when using a dilution system, the dilution is accurate every time and eliminates the unnecessary use of more chemical concentrate than needed and eliminates spills which results in chemical loss.

Cleaner Facility

Using more chemical than necessary can leave behind a chemical residue on surfaces being cleaned. This excess chemical can create a film and cause a dull or sticky surface, which can actually make your food service facility appear dirty. This can then lead to a vicious circle of using additional cleaner and time is wasted trying to get surfaces looking clean again.

• Employee Safety

As the dilution is done entirely through a system, the worker's exposure to chemical concentrates is entirely eliminated.

ModularFlex Series

The ModularFlex Series have been developed to reduce the cleaning footprint with their high concentration and flexibility, they require less packaging and storage space. Combined with the ModularFlex System, these products offer versatile chemical dispensing.

M1 Restroom Cleaner Emulsifying Cleaner

Suitable for toilet bowls, urinals and porcelain. It removes encrustations, scale and stains while keeping toilets bright, clean and smelling fresh. Certified UL 2759

M6 Oxy-Q

Hydrogen Peroxide Based Disinfectant Over 500 applications. 97% of cleaning needs addressed in one bottle. Non-toxic and safer than chlorine bleach. Cleans, degreases, deodorizes and disinfects. Certified UL 2794. DIN: 02464314

DEGREASER

DUSTBANE

M11 Degreaser

Hard Surface Cleaner & Degreaser Cuts through grease, oil, and heavy soiled surfaces. Suitable for the food service and industrial settings. Solvent free, caustic free. Certified UL 2759

Proportioning/Dispensing Systems

These portable dilution systems are lightweight for easy cleaning anywhere water is available. These units connect to a concentrated chemical container, creating a closed loop, and a standard hose is used as the water source. It allows for safe manipulation of the chemicals by preventing any leaks or direct contact.

Eco Easv Fill

The water flows through the unit and venturi pressure pulls the correct amount of concentrate as determined by the built-in metering device and mixes it with water for easy dispensing.

Extra Heavy-Duty Scouring Pad

Ideal for pots and pans with its powerful scouring action. Removes heavily encrusted baked-on food, even stubborn cheeses and thick sauces. Great alternative to the metal scouring pads.

Format	Code	Case QTY
6" x 3.5" x 0.75"	41590	40

Large Cellulose Sponge

Ideal for general maintenance. More absorbent than polyurethane sponges and stronger so they last longer.

Format	Code	Case QTY
5.75" x 3.75" x 1.5"	41653	24
7" x 4" x 1.5"	41664	24

Light-Duty Scrubbing Sponge

Dual-action cleaning tool. One side has a light-duty scouring pad for scrubbing and cleaning and the other, a cellulose sponge to quickly wipes up spills and messes and can carry cleaning solutions to the work surface. Will not scratch or dull most surfaces.

Format	Code	Case QTY
6" x 3.5" x 0.75"	41539	40

Medium-Duty Scrubbing Sponge

Dual-action cleaning tool. One side has a scouring pad for scrubbing and cleaning and the other, a cellulose sponge to quickly wipes up spills and messes and can carry cleaning solutions to the work surface. Will not scratch or dull most surfaces.

Format	Code	Case QTY
6" x 3.5" x 0.75"	41651	5
